Personnel Notes

Kandel's **intellectual curiosity is prodigious**. After graduating at the top of her class at both MIT and Hopkins, Kandel spent five years in a CDC fellowship before acceding to the recruitment efforts of a ██████████

From classical music to art and basketball, Kandel loves many things, but loves the thrill of solving a puzzle the most. Widely known by her peers as a **puzzle-solver**, she's **never backed down from a new challenge** thrown her way.

Her drive, confidence, and intellect, though excellent, **can be intimidating** to others; and although she remains humble about her abilities, she doesn't have time for your pride—she has breakthroughs to discover.

After her mother died of ██████████ she was nine, her father raised her on the Upper West Side. She, in turn, helped care for her younger twin brothers, although this often proved a struggle, given Kandel's predilection for her studies and solving the next puzzle, the next challenge. Her pursuit of conquests outside of her personal life isolated Kandel from those closest to her and, later in life, led to the dissolution of her marriage. It is with a twinge of irony, then, that she finally began to come to terms with her divorce only when the ██████████ struck New York.
